FACTS ABOUT HYDROCEPHALUS

- Normal Pressure Hydrocephalus (NPH) is an abnormal accumulation of cerebrospinal fluid (CSF) that causes the ventricles in the brain to become enlarged, sometimes with little or no increase in intracranial pressure (ICP).
- 40,000 hydrocephalus operations are performed annually. That's one every 15 minutes.
- The medical costs of treating hydrocephalus are over \$1 billion per year, yet the National Institutes of Health (NIH) invest less than \$1 million per year in hydrocephalus treatment.
- Hydrocephalus is the most common reason for brain surgery in children.
- 1,000,000+ Americans live with Hydrocephalus
- 1-2 in 1,000 infants are born with Hydrocephalus
- 1 in 100 seniors develop normal pressure hydrocephalus, which is often confused with Alzheimer's
- 1 in 10 dementia patients have normal pressure hydrocephalus, but may never be diagnosed
- NPH is often misdiagnosed as Alzheimer's or Parkinson's because of the triad of symptoms: mild dementia, impaired bladder control, gait disturbance.
- The primary treatment uses a device developed fifty years ago that has one of the highest failure rates of any surgical treatment.
- Hydrocephalus can only be treated with BRAIN SURGERY, and there is currently NO CURE.
- September is Hydrocephalus Awareness Month
- 60% of children with hydrocephalus will not be independent as adults
- It really IS brain surgery, but it shouldn't have to be.

COMMITMENT FORM

AS A PARTNER, WHERE DOES YOUR MONEY GO?

Net proceeds will be donated to the Hydrocephalus Association and/or other charitable foundations actively searching for a cure for hydrocephalus, other nonprofits that have set up programs to help families in need, and directly to families in need on a word-of-mouth basis. Approximately 5% is spent on administration. We pledge to be good stewards of the funds invested in our mission.
